Detailed Reports on Safety Evaluation of Indian Nuclear Power Plants post Fukushima Accident

Post the events at the Fukushima Daiichi nuclear power plant in Japan following the massive March 11, 2011 earthquake and tsunami, NPCIL had constituted four task forces to review the safety of the existing Indian nuclear power reactors in operation. A brief of the findings of the task forces were released in April 2011. In addition, two more task forces to assess the safety of the reactors under construction - one for the 1000 MW VVERs (Light Water Reactors) at Kudankulam in Tamilnadu and the other one for indigenous 700 MW Pressurised Heavy Water Reactors (PHWRs) at Kakrapar in Gujarat and Rawatbhata in Rajasthan respectively were also constituted. The detailed safety evaluation reports titled **Safety Evaluation of Indian Nuclear Power Plants, post Fukushima Accident**, of the six task forces along with the implementation status of the recommendations of the earlier safety reviews of Indian Nuclear Power Plants post national and international events - Narora incident, Chernobyl and Three-Mile Island accidents have been released today. The said information is posted at NPCIL website www.npcil.nic.in for information of the public.
