KAPS-2 poised for startup

Kakrapar Atomic Power Station located at Kakrapar in Tapi district of Gujarat comprises of two units of indigenous 220 MW Pressurised Heavy Water Reactors (PHWR) – KAPS-1&2. These units have been in operation since 1993 and 1995 respectively. Two more units of indigenous 700 MW PHWRs (KAPP-3&4) are under construction at this site.

KAPS-1&2 were taken up for En Masse Coolant Channel Replacement (EMCCR) in July 2016, to enhance their performance & safety. EMCCR involves replacement of all the 306 coolant channels of the reactor cores. The EMCCR was carried out in a project mode and has since been completed in KAPS-2.

Now the unit will be brought to operation after obtaining stage-wise clearances from the regulatory authority.
