CMM/Station/Unit-1 to 4/CMU/27337	16-03-2026	M/S PRIME ENGINEERING CORPORATION	CMM/Station/Unit-1 to 4/CMU/27337/PO-511687706919744	07-07-2026	59,68,503.00	03-01-2027	M/s Emerson–Flexim make portable clamp-on ultrasonic flow meter transmitters and sensors are presently available with CMU and are being effectively used for precise and accurate flow measurement across various pipeline sizes. However, the number of sensors suitable for small line sizes is insufficient to meet current operational requirements. Additionally, additional transmitters are needed to operate the larger sensors already available with CMU. The sensors and transmitters of M/s Emerson–Flexim are proprietary and mutually compatible components, designed to function exclusively with each other. These sensors cannot be interfaced with any other make of transmitter, and similarly, the transmitters cannot be operated with third-party sensors as it may result in compromised performance, accuracy, or system integrity. Therefore, the required sensors and transmitters must be sourced solely from the OEM, M/s Emerson. In view of the above, and considering the proprietary nature of the equipment along with the need to maintain compatibility with existing systems, approval is requested for proprietary procurement of the required sensors and transmitters from the OEM,M/s Emerson or its authorized distributors. Parker Hannifin make and Part numbers are mentioned in NPCIL General Arrangement Drawings. These are critical seals to maintain the system in-tact at high pressure and high radiation field in long term operations. These seals are qualified to withstand radiation field of 10^8 rad. Any failure of these seals will cause spillage of heavy water which results in system outage as well as significant event for station. Unexpected Maintenance of system also attract high manrem and tritium uptake of working personnel. In view of above, the indented items are proprietary in nature and can not be procured through generalized specification. Indent approving authority is requested to approve the above proposal for proprietary procurement of indented items from M/s. Parker Hannifin India Pvt. We are having Ravvity make liquid scintillation analyzer for tritium activity analysis in aqueous samples. Glass vials are used for taking sample + cocktail for tritium activity counting in liquid scintillation analyzers for analysis purpose. Ravvity make glass counting vials are made of low potassium borosilicate glass due to which background counts gets reduced considerably resulting in enhancement of minimum detectable activity. Low tritium activity samples, reactor system samples etc. where accuracy plays important role can be measured very accurately by using Perkin Elmer glass vials. Ravvity make glass vials are having uniform wall thickness which result in excellent counting reproducibility. Ravvity make glass vials material is chemically inert & impermeable to cocktail solution . Ravvity make glass vials are having good visibility to check sample/cocktail appearance. Counting efficiency of Liquid Scintillation Analyzer increases considerably by making use of Ravvity glass vials. No one else can supply Ravvity make glass counting vial. From point of compatibility, Ravvity make vials are suitable for liquid scintillation analyzers being used at HPU, KAPS 1&2.	CS-1&2	NA	KAPS

Thus, minimum inventory of 1400 liter of lube oil is always required to be maintained at site for emergency operation. Also, during routine DG testing, average 2 drum lube oil is expected to be consumed in one month. At present, inventory of only 210 liter (1 drum) is available in sectional store. Hence qty of 1470 Liter is proposed to meet operational emergency.	SME(M)	NA	NAPS
